

Product Data Sheet

Category: Signage / Project

Application: Testing of neon and fluorescent tubes

Product Code: N-TEST

Product Name: Tube Tester

- Features:**
- Designed for field or workshop testing of neon or fluorescent tubes
 - Easy and simple to use
 - With the extendable antennae probe held against the tube and the button activated, the tube will flash if it is still gassed and operable (works best for neon if contacted against the electrode end of the tubes). If the tube does not light up, then it is inactive or de-gassed.
 - Requires 4 x AA batteries (when installing batteries, ensure that polarity is correct as reverse polarity will permanently damage the tester)
 - LED indicator on tester will illuminate if tester has sufficient charge. If LED does not illuminate then batteries require replacing.
 - This unit comes with a protective cover/pouch and belt clip
 - Dimensions: 195(L)x18(W)x40(H)mm
 - Caution: when activated, this unit discharges a high voltage at high frequency. Only use for testing tubes; do not use against persons or animals. Do not activate near flammable liquids or gases. Use with care.
